

tobacco users to quit. FDA estimates such a policy would help five million people who currently smoke to quit in the first year, prevent more than 33 million youth and young adults from regularly smoking cigarettes and save more than 8 million lives this century.

In addition, FDA is working to implement premarket review requirements for e-cigarettes. Since flavors increase the appeal and use of e-cigarettes by youth, removing all flavored e-cigarettes from the market would significantly reduce current high rates of youth e-cigarette use. FDA should continue to use the premarket review process to deny applications for flavored e-cigarettes, promptly complete its review of remaining applications, and take urgent action to remove all unauthorized flavored e-cigarettes from the market.

We are disappointed that the House FY 2024 Agriculture, Rural Development, Food and Drug Administration, and Related Agencies Appropriations bill included two tobacco-related riders that would have prohibited FDA from finalizing and implementing its menthol cigarette and flavored cigar rules and from issuing a proposed rule to reduce nicotine levels in cigarettes to minimally or non-addictive levels. We are grateful that the FY 2024 Consolidated Appropriations Act did not include these provisions.

As work on the FY 2025 Agriculture appropriations bill proceeds, we urge you to not include these tobacco-related riders or any other provisions that would narrow, weaken, or modify FDA's current authority to oversee tobacco products.

Sincerely,
