

Pneumococcal pneumonia

is an **infectious respiratory illness** that can disrupt your life for weeks. In severe cases, it can lead to hospitalization.

If you are an adult and have one or more of the following medical conditions or risk factors, you are at increased risk for pneumococcal pneumonia.

- Aged 65 years or older
- Asthma
- COPD*
- Chronic heart disease
- Diabetes
- Cigarette smoking

Talk with your healthcare provider today about pneumococcal pneumonia vaccination.
